The hospital is one of the NHS Trust's new generation of hospitals where more emphasis is put on flexible, adaptive, and calming external spaces for staff, patients and visitors alike. CBA undertook a full design service for the 5 courtyards in the hospital building complex and provided design advice for the wider site. Some of the courts were constructed over podium decks and were in effect roof gardens. In the context of a design and build contract and limited budgets, CBA used fresh thinking to the conceptual development and was able to closely monitor cost implications and adapt the proposals to create high impact with low levels of investment. Despite budgetary constraints a technical understanding of the site and careful use of materials allowed diverse and attractive courtyards to be created.
