Milton Keynes Green Infrastructure Design Guide

2010 Landscape Institute Awards

CBA was appointed to develop a design guide to illustrate the benefits of embedding Green Infrastructure (GI) into the design of sustainable communities. The guide sets out principles for the design of green spaces to transform urban life by cooling cities, filtering out pollutants, improving people's health, supporting wildlife and creating attractive places to live and work in. The design principles aim to help raise aspirations for higher quality and more sustainable developments by demonstrating how investment in GI can add value to development. The GI Design Guide won the Local Landscape Planning category in the 2010 Landscape Institute Awards.
