www.cbastudios.com

The vision for Al Zorah envisages a city for 150,000 people that will be planned in accordance with the basic principles of liveability and sustainability. It will be a show place of energy-wise infrastructure, building and environmental design. A rich network of parks, beachside promenades, canal and roadside green corridors, mangrove conservation zones and leisure facilities will create a pedestrian friendly, climate controlled amenity for the city.
